your guest

DND & Housekeeping

Doorbell

The signage located in the hallway outside each room has a do-not-disturb indicator, a housekeeping indicator, and a doorbell. The two indicators are clearly marked and illuminated. The doorbell provides your guests with a pleasant sounding, no knock experience. From within their room, guests are able to select the housekeeping or do-not-disturb status using the simple 'touch technology' of the ReadyMaid Switch.

Additional Features

houseKeeping

From any desktop computer or PDA your managers and supervisors can monitor the status of a room, efficiently updating it when the room is ready for inspection. This enables your supervisors to effectively manage staff flows.

guestPresence

guestPresence allows your staff to determine if a guest is in the room without disturbing the guest. Simply point a key fob at the hallway indicators and ReadyMaid will respond with a light indicating if there is a guest in the room or not.

miniBar

miniBar detection allows your staff to determine from outside of the room if the mini-bar has been opened. Simply point a key fob at the hallway indicators and ReadyMaid will respond with a light indicating if the mini-bar has been opened.

trayTracker

The trayTracker feature instantly notifies your staff when a room service tray is placed outside the room. As a standalone product or discretely built into the ReadyMaid room sign, this feature senses empty food trays and alerts your staff to their exact location.

callValet

Call your car with the touch of a finger! The ReadyMaid callValet feature allows guests to request their vehicles in a less-intrusive, user-friendly manner.

Interact with ReadyMaid devices and their associated features from a PDA or desktop application.
