

# miniBar

“If I only have to go into 50% of the rooms  
I’m cutting time in half.”

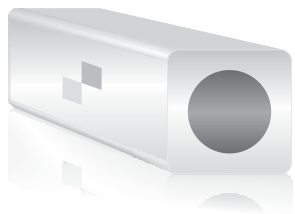

## What It Does

Axxess miniBar system allows your staff to remotely see whether a minibar has been opened, without entering the room, thus leaving guests with unopened minibars undisturbed.

Opened minibars can easily be checked for consumption, be restocked and recorded with our Minibar app for your favorite mobile device.

## How It Works

Using a smart phone running our Minibar app employees view a short list of rooms where the minibar has been opened. All restocking can easily be recorded and shared on our Minibar app with just a few taps.

## The Devices

One simple device will change the way you manage minibars. Our wireless **Contact Sensor** is so small you won't notice it. It's as simple as "open" or "closed", but that information can save your staff many hours of needless work.

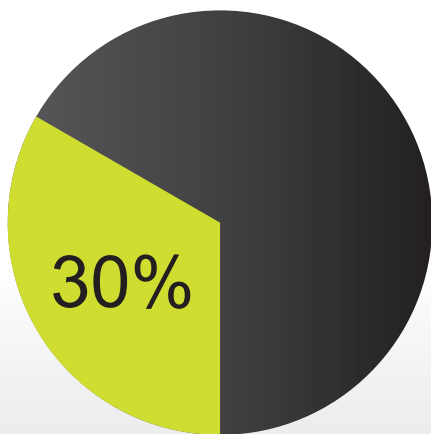

Wireless, the battery lasts for years. So simple.

## The Software

The Axxess Minibar app lets you view if a room's minibar has been opened and it provides you with a new simple way to report restocking.

Our desktop Minibar software allows for complete inventory management. From custom minibar stock definition, through supplier management and cost and pricing detail, to detailed reporting/invoicing for swift charge recovery, the software makes your minibars earn their keep.

Finally.

Minibars Opened

## The Math

In an average hotel only 30% of minibars are opened and yet a Minibar Stocker needs to go into the other 70% of rooms to check. This is a daily routine that over a year adds up to hundreds or thousands of wasted hours. Axxess makes it simple. Know before restocking if a minibar has been opened. Only enter rooms where the minibar has been opened.

Don't disturb guests without reason.

Save money, make guests happy.

The ultimate win/win.
