

# trayTracker™

“No more trays left in the hallway.  
Can you believe that?”

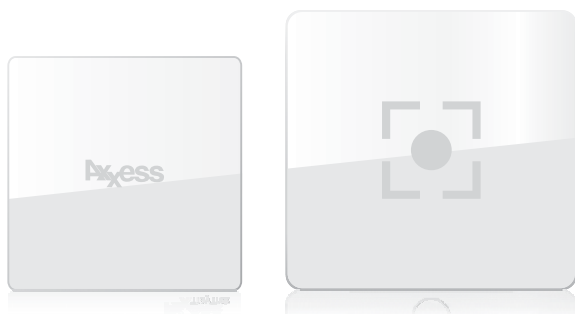

## What It Does

trayTracker™ instantly notifies your staff when a room service tray or trolley is placed outside of a guest's room.

## How It Works

The **Tray Transmitter** on the food tray or trolley emits a signal that is picked up by the **Tray Detector** located in the SmartSign™ Module or in the Plug-in Tray Detector module. The Tray Detector wirelessly alerts your hotel staff via our AxxessTrays software, conveniently available on any desktop or mobile device with network access.

## The Devices

Our **Tray Transmitter** is a sleek device that can be placed on a food tray or attached to a trolley. Axxess Plug-in **Tray Detector** can be plugged into any wall outlet in the hallway and will detect when the **Tray Transmitter** has been left outside a room. If you have our privacy **Service** signs installed they can act as the Tray Detector and there is no need for a wall plug unit.

## The Software

AxxessTrays™ is a powerful web-based tool to monitor and manage your room service food tray and trolley deliveries. Axxess Tray Tracker devices provide you with real time information on where food trays and trolleys have been left outside a room for pickup.

Tray Recovery

## The Math

It's no joke. **trayTracker**™ will allow you to recover trays and trolleys at previously unheard of times. Without **trayTracker**™ the average food tray or trolley sits outside the room for over 6 hours, sometimes for a day. **trayTracker**™ allows you to bring that number down to under 10 minutes. All this without sending staff cruising for trays.
